I've been busy with lots of projects. But here are a few of my favorites. In the meantime, enjoy the fall with these free patterns and goodies! For my third project in our weekly challenge, I decided to use one of the cool fall printables from Artisans' Gallery. I printed this to use as the background on the front and the inside pages. I then cut out the letters. I used a circle cutter to make the circles and added black outlines. On the inside of the notebook, I added a page of cupcake themed stickers. I made a1d647c40b

Go to the web-site on the bottom left corner: Step by step A: Just download the actual.exe file, copy it to your hard drive, and run it. It's quite straightforward (you can even use it without registering or paying first, just enter your email as your autocad log in). Download the Autocad lite version (for free) Install it Go to the website Click on the download link Click on the Autocad icon (it will say "download" then you just have to agree to the Terms and Conditions) Voilà, you have Autocad lite. Q: Custom animation - overlap by value of view I have created a custom animation which overlays two views (bounds rectangles) and I can get it to work fine. The problem I have is that it is animating with a smooth animation rather than a fast one (like if I were to start the two views sequentially). I don't see any way of telling the view that I want to animate with a fast animation. A: Simply use ObjectAnimator to set duration of alpha to 0 or 1 Q: Nested if-else-if statements: any better solution? I'm doing some copy-paste tasks and ended up with a code like this: if(a == b){ if(c == d){ return true; } else { return false; } } else { if(c == d){ return true; } else { return false; } } I was wondering if I can do some optimization? A: Another option would be to use an approach that's common in data processing, which is if-else-if-else. The other condition is in your else: return false; You're returning false in every case, so just remove it. That means, all the conditions will return true, and you can use the simple if construct: if(a == b && c ==
