High school students make models of components of a modern car using Microsoft Paint, pen, paper, plastic, and glue. Although the paint and paper are physical tools, they are used for the creative process only, not for the construction of the finished model. AutoCAD 2019 has been around since the release of AutoCAD 2018, but it looks and feels very different in 2019. The new look and feel was introduced in AutoCAD 2018 Release 18.1, and new toolbars and ribbon were introduced in Release 18.2. In 2019 Release 19, the ribbon, dropdown menus, palette, status bar, and toolbars have been replaced with a single ribbon. The ribbon in AutoCAD 2019 was designed to focus the user's attention on the most important tools, making it easier to see when the tool is selected or active. AutoCAD 2019 also retains the features introduced in the ribbon and toolsets in 2017. Traditional menus have been replaced by single dropdown menus, which allow the user to customize the default settings in each menu, and submenus or contextual menus. In the previous version of AutoCAD, the menu was static and the user could only select or deselect the menu items. In AutoCAD 2019, the menu items can be individually or jointly deselected and can be replaced by different menu items. This makes it easier to customize the menus. In AutoCAD 2019, the user's display is organized into a new "area mode" instead of the "viewport view" that has been used since the first release. The area mode displays the selected objects on the main drawing area of the document. The area mode can be used to review a project or to compare objects. The viewport view displays the objects in a 3-D view of the drawing area. The viewport is often used to zoom into an area of the drawing that is too big for the display area. The area mode has been introduced in AutoCAD 2018 as an experimental feature, and some users did not like it. In 2019 Release 19, the area mode is now the default display, which makes it easier for users to get used to. In addition, the main menu and the start menu (desktop shortcut menu) in AutoCAD 2019 have been redesigned. The main menu has more categories than in previous releases. The start menu has been designed to reduce the number of shortcuts to essential tools. To make the tools more accessible, the AutoCAD 2019

HyperGraph is a graphical, object-oriented programming environment for creating workflows. The main focus of the programming environment is to allow users to set up workflows that can be used to automate tasks in AutoCAD. HyperGraph is also used for other tasks such as development of Visual LISP extensions and AutoLISP extensions. Visual LISP The Visual LISP is an interpreter for creating, compiling, debugging, and running programs written in a Visual LISP-based language. This supports, among other things, extending AutoCAD with custom commands and scripts. An example of customizing AutoCAD with Visual LISP is a command that removes all the walls from an open model. Visual LISP also supports the use of AutoCAD extensions and is used by plugins to access AutoCAD. VBA Visual Basic for Applications (VBA) is an ActiveX control that allows VBA scripts to be created for AutoCAD. A custom VBA command can be created to, for example, determine the maximum and minimum value of a field in a drawing. On May 31, 2007, Autodesk was the first company to release a version of the AutoCAD engine for Microsoft Windows. The release of AutoCAD version 2006 was made available for Microsoft Windows Vista. AutoCAD's object-oriented scripting language is based on VBA and allows the creation of a wide variety of applications, but this must be done within a Windows-based system. Macro Manager Macro Manager is a feature of AutoCAD which allows users to create their own custom programs. It is based on the Visual LISP language. Users can select blocks from a model or from other documents and create custom programming which can be saved and reused. ObjectARX ObjectARX is a C++ class library used as the base for a number of extensions created by third-party developers. There are a large number of AutoCAD plugins (add-on applications) available on the application store Autodesk Exchange Apps.
